13.1

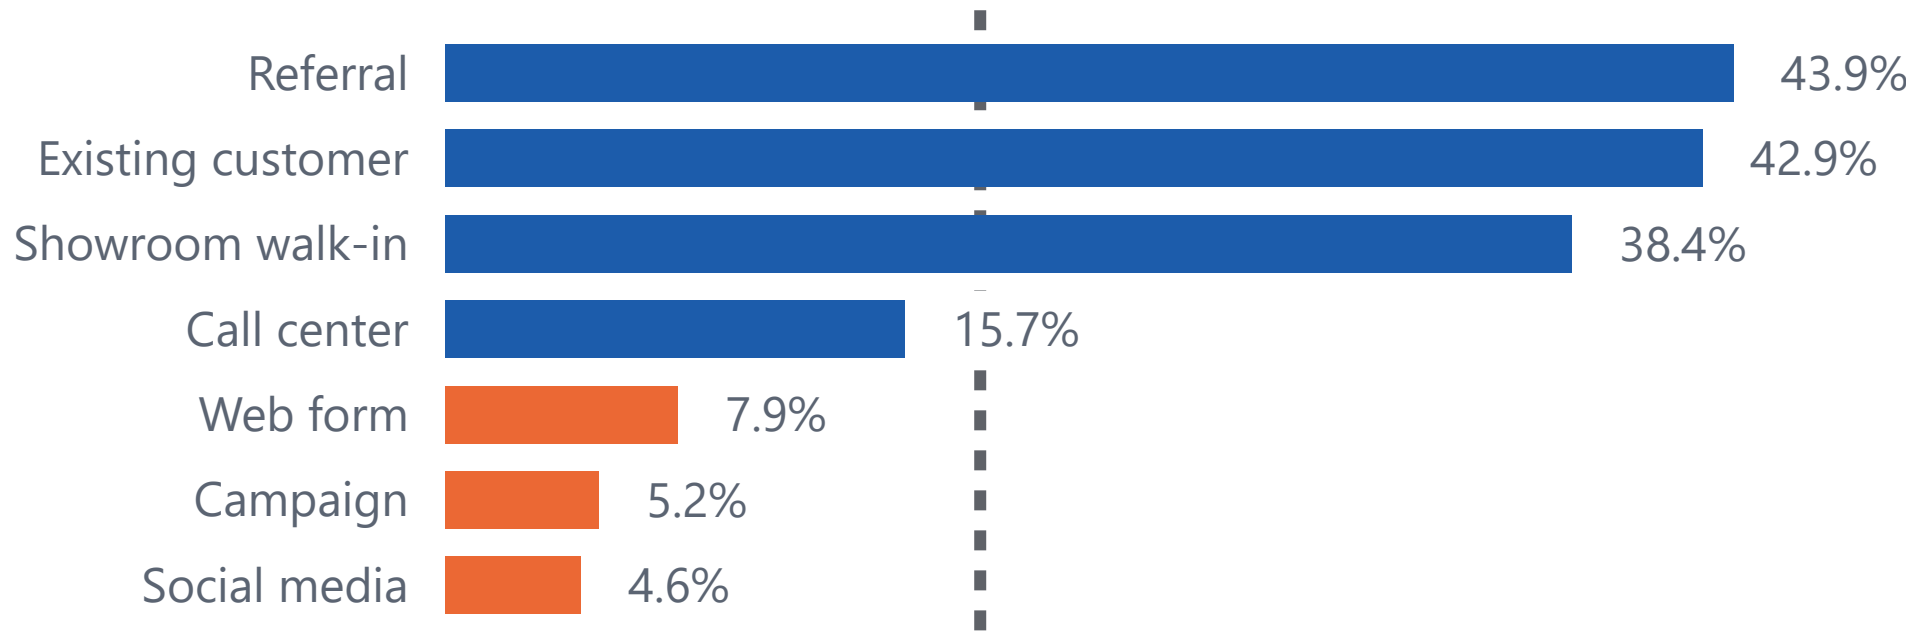

Half of leads get an offer; 38% of offers close

Leads → Offers → Won · hover for % of previous stage

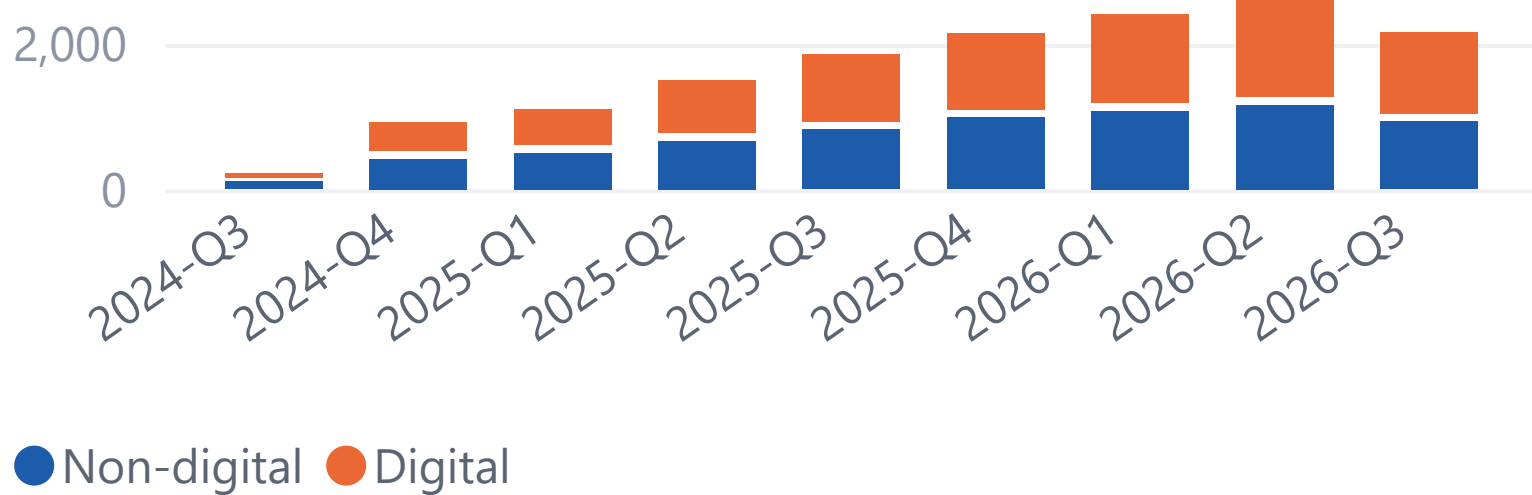

Referral and showroom convert 6× better than digital sources

Lead-to-sale conversion by source · orange = digital

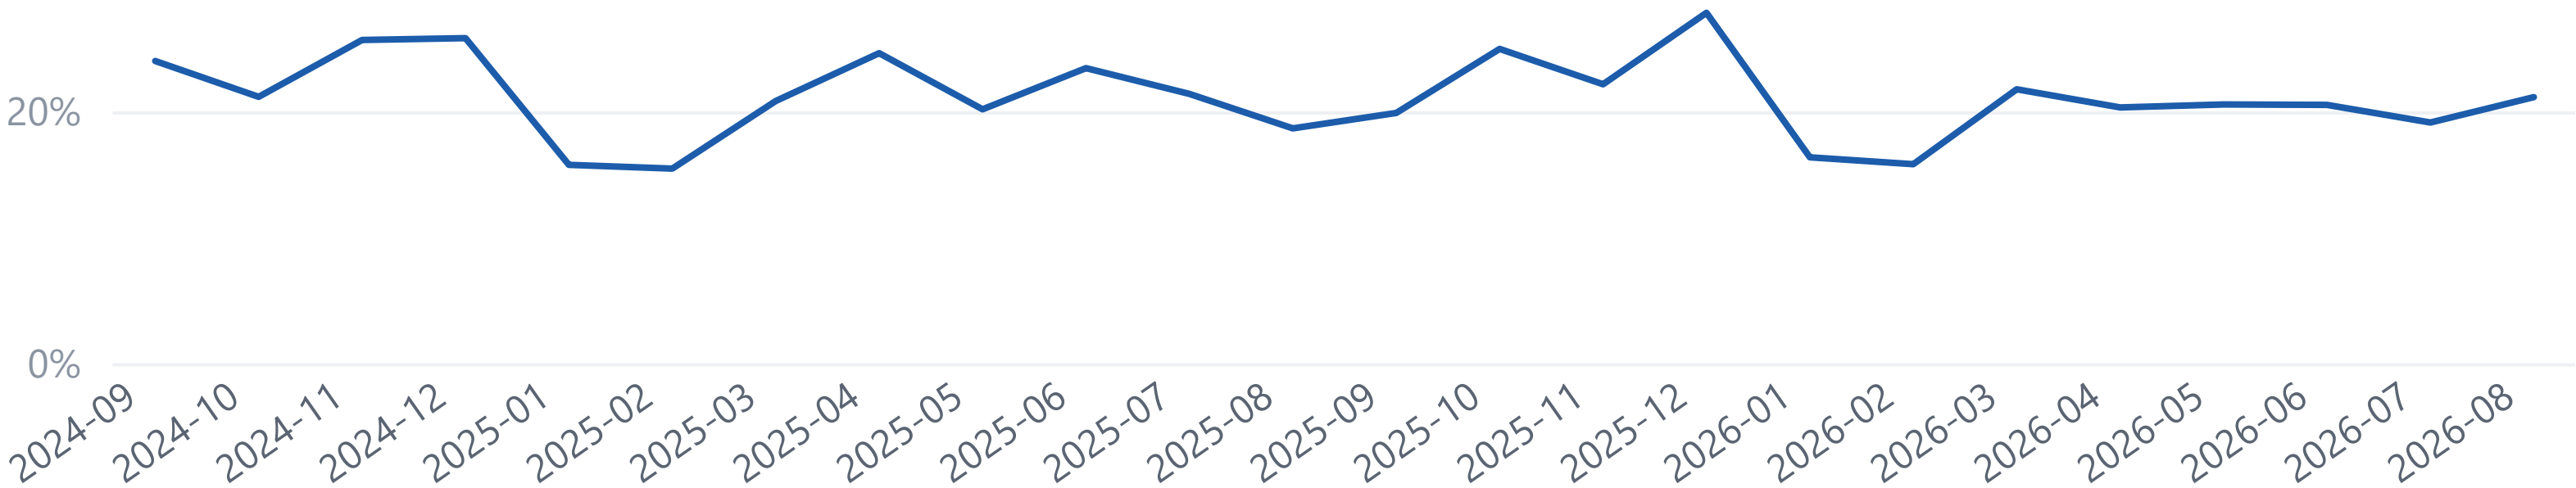

Digital brings 55% of leads at 7% conversion — the queue the assistant ranks

Leads per quarter · orange = web form, social media, campaign

Closed-lead conversion holds near 20% while volume tripled — December peaks, January–February dips

Conversion among leads that already have an outcome, by lead month (open leads excluded, so the latest months are not understated)

Open leads

1,960

Stale

752

Stale share

38%

Over a third of the open pipeline is stale

Stale = open for more than 30 days with no contact in the last 14 days.

Advisors in the Istanbul branches work 40–70 open leads in CRM order. The Lead Intelligence Assistant (part 2) re-orders that queue by conversion probability and drafts the next action — the high-volume, low-conversion digital channels are where that pays off.

Two authorized dealers convert below 75% of the network — on every channel

Most repairs are formatting; the errors are orphan keys and duplicates

Failed rows by check · orange = error severity

What Silver did with each problem

Rows by action · a flag never deletes a row

How to read this page

A flag means the check found a problem and Silver either corrected it (standardized, imputed, repointed) or marked it explicitly (flagged, nulled). Flagged rows stay in Gold with a dq_flags entry, so every KPI on the other pages can be reproduced with or without them.

Ground truth: the synthetic generator injected 22 defect types with known counts; 12 of 18 comparable checks match exactly, the rest within ± 8 rows (docs/dq_injections.md).
